## UV-INTEGRATOR

The flat UV integrator is a continuous measuring instrument for the regular control of the present irradiation energy E and for the determination of the necessary UV radiation quantity for a total curing of the UV coating and thus to find out the necessary conveyor belt speed.

### Standard execution

- Massive flat aluminium casing
- 3 digits LCD display in mJ/cm<sup>2</sup>
- Photocell with UV filter at the back
- Durable lithium battery
- Certificate and operating instructions in English

### Features

- Robust execution
- Easy handling
- Measuring value display in relevant unities
- Usable for undefined lamp spectra
- High measuring repetition exactness

### Accessory

- Heat shield to protect the measuring instrument by long measurements of high temperatures

### Safety note

UV radiation is unhealthy for the skin and the eyes.
